

Moretonhampstead Health Centre is making a Green Impact!

We are improving our sustainability and reducing our negative impact on the environment by using the Green Impact for Health toolkit. This has a range of targets to work towards, for example using renewable energy, recycling materials, reducing unnecessary prescribing, using Fair Trade products and many more.

This year we hope to achieve the Bronze award.

Green Impact for Health is a programme developed as a collaboration between the University of Bristol, the RCGP, HEE South West and the National Union of Students.
